

Unidade 5 – Anatomia Sistêmica

SISTEMA RESPIRATÓRIO

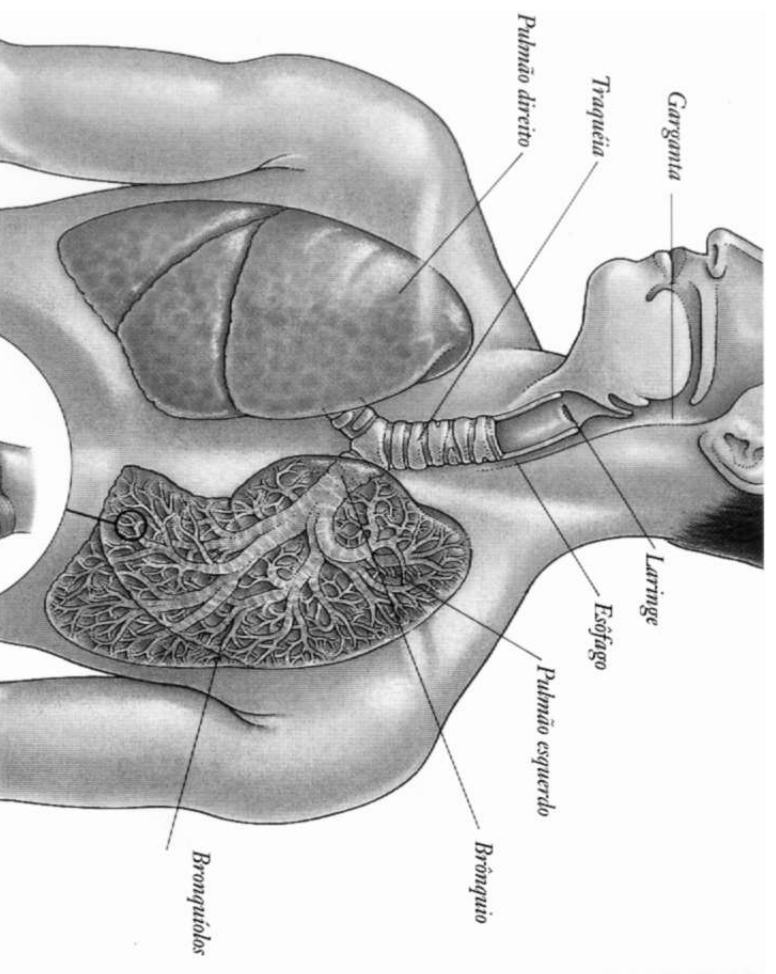

ANATOMIA HUMANA

Breno Gontijo do
Nascimento

ÓRGÃOS

- Nariz
- Faringe
- Laringe
- Traquéia
- Brônquios
- Pulmões*

* - órgãos constituídos de brônquios intrapulmonares, bronquíolos, alvéolos, artérias, veias, capilares, vasos linfáticos, linfonodos, nervos e tecido elástico.

Nariz

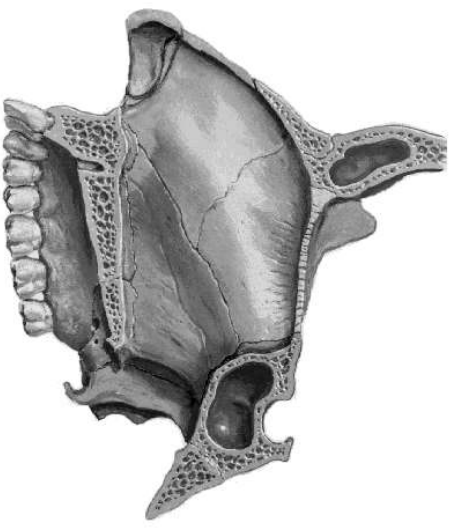

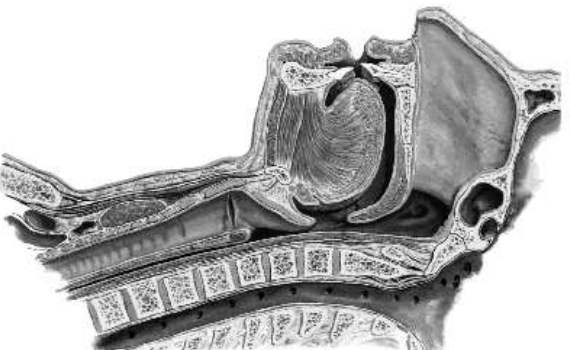

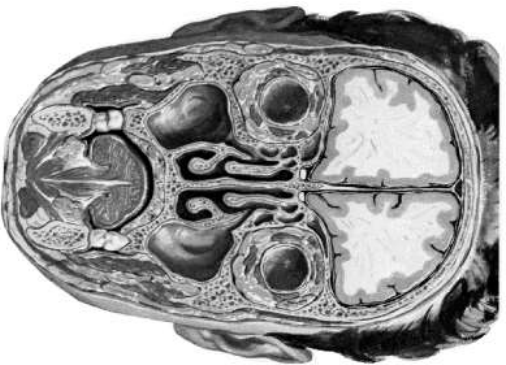

- Nariz externo
 - narinas
 - ápice
 - dorso
- Cavidade nasal
- Seios paranasais

- Cavidade nasal *Nariz*

Septo nasal:

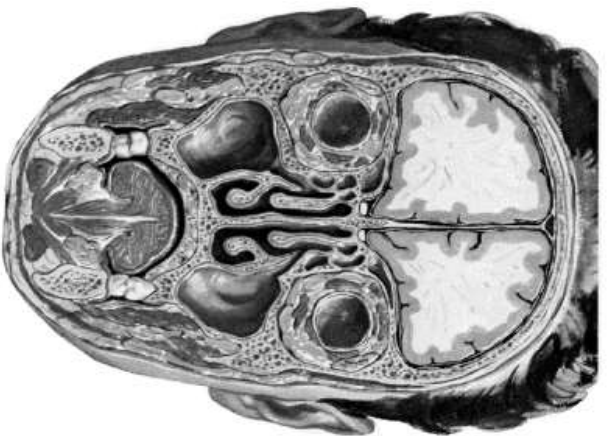

- Vômer
- Lâmina perpendicular (osso etmóide)
- Cartilagem do septo nasal

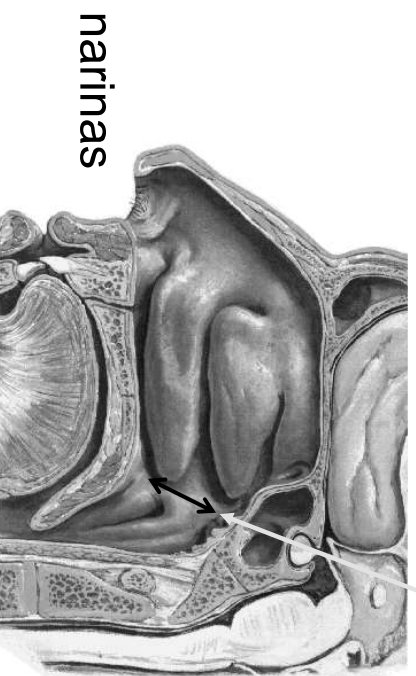

Nariz

- Cavidade nasal

Cavidade nasal
direita e esquerda

cóanos

narinas

Conchas nasais

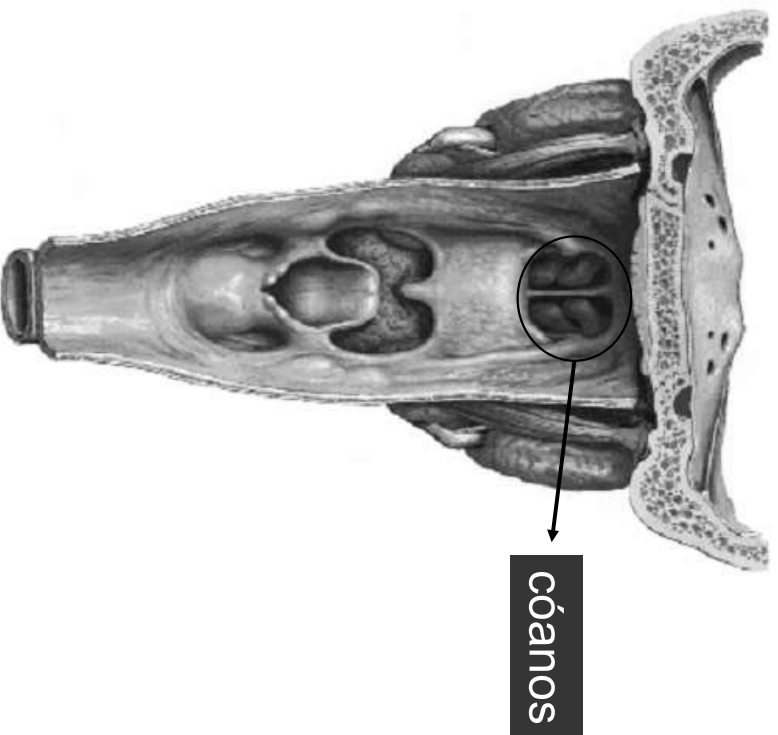

- superior
- média
- inferior

Meatos nasais

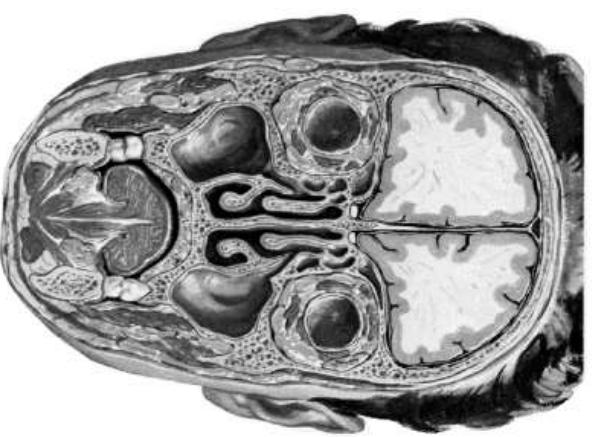

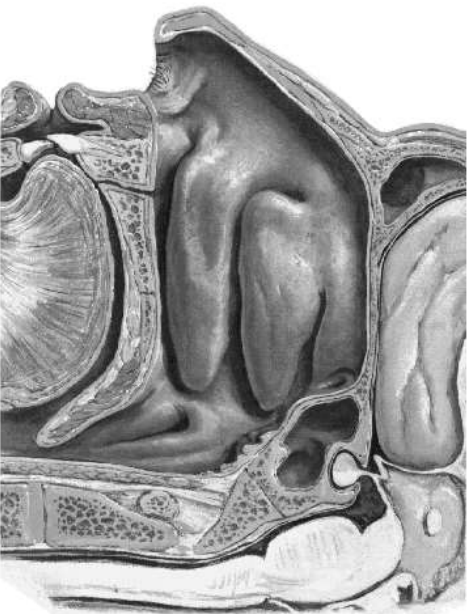

- superior
- médio
- inferior

Nariz

- Cavidade nasal

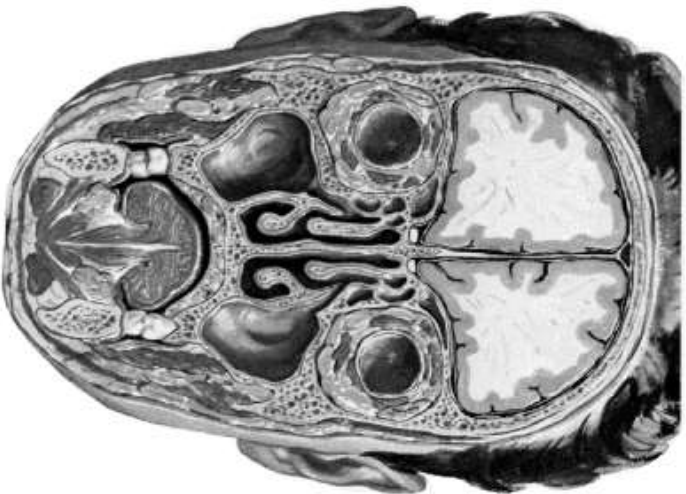

- Funções das conchas nasais:
 - Reduzir a velocidade do ar
 - Umedecimento do ar
 - Aquecimento do ar
 - Filtragem do ar

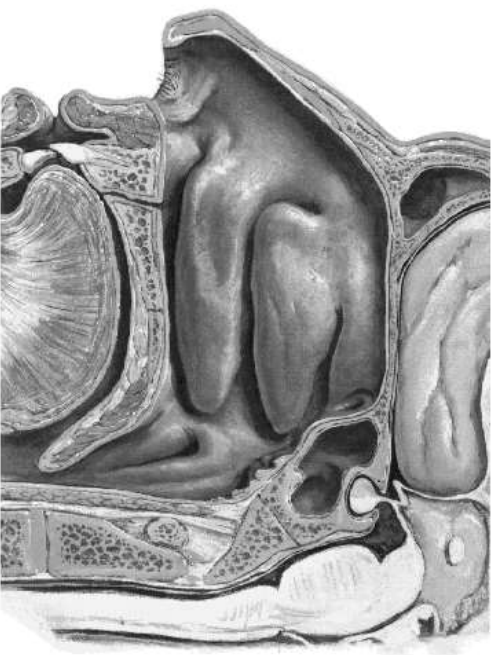

Nariz • Seios paranasais

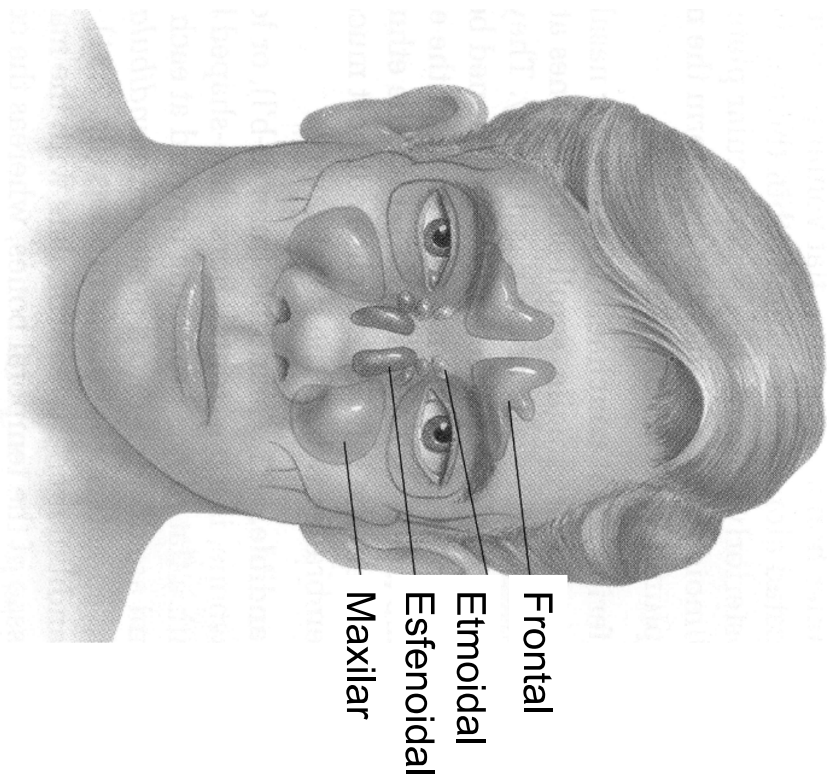

- Maxilar
- Células etmoidais

- Frontal
- Esfenoidal

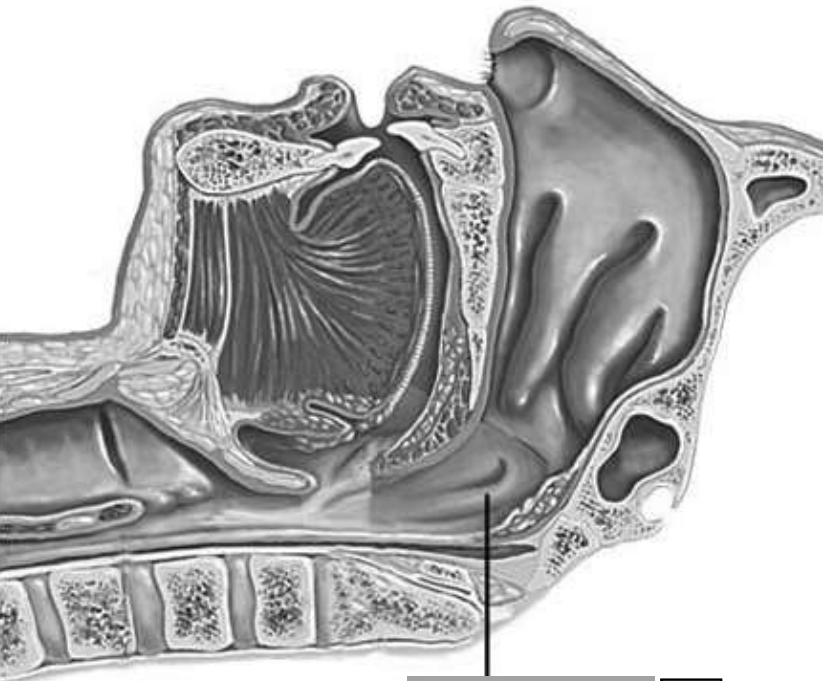

Seios Paranasais

Regiões da Faringe

Regiões da Faringe

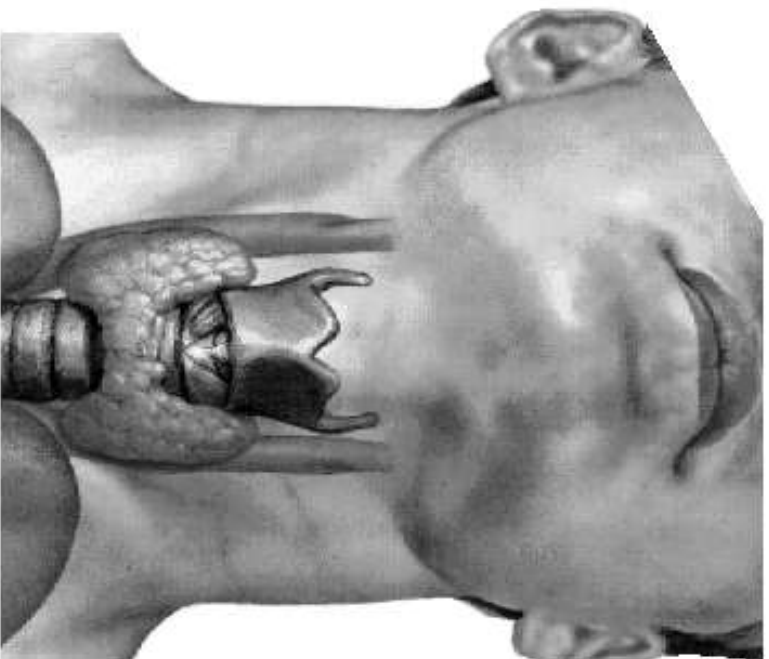

Nasofaringe

- Toro tubário
- Óstio faríngeo da tuba auditiva
- Tonsila faríngea

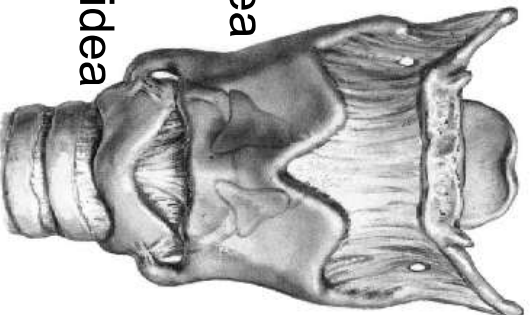

Larynge

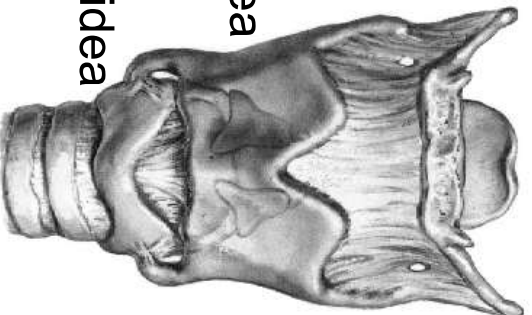

Laringe

Osso hióide

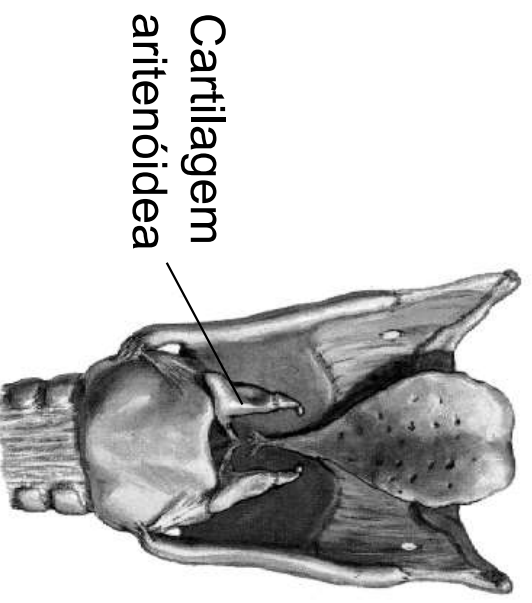

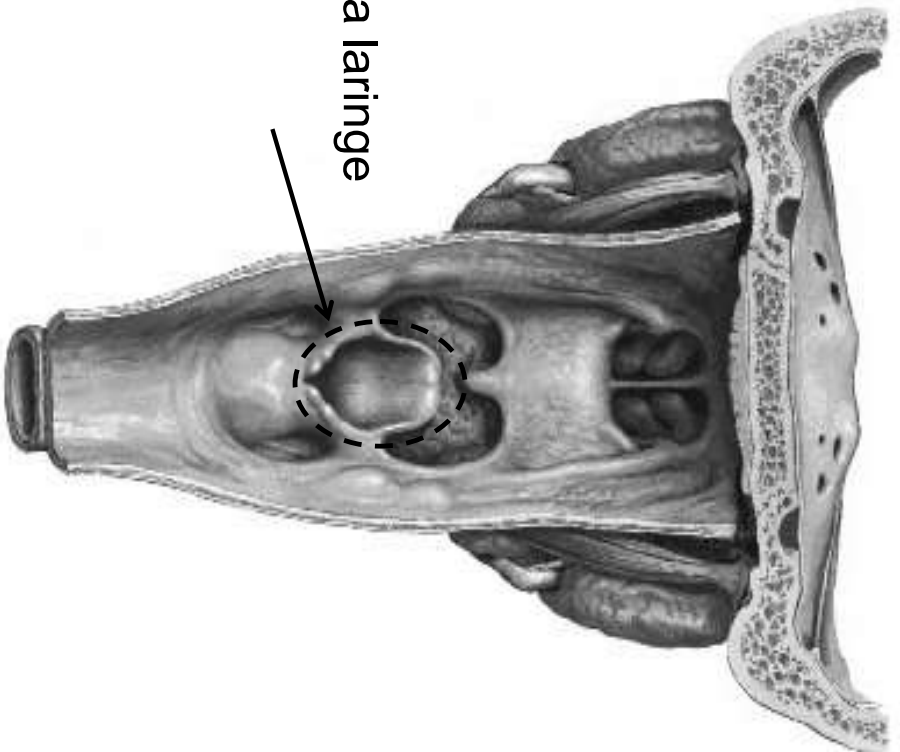

Cartilagem tireóidea

Cartilagem cricóidea

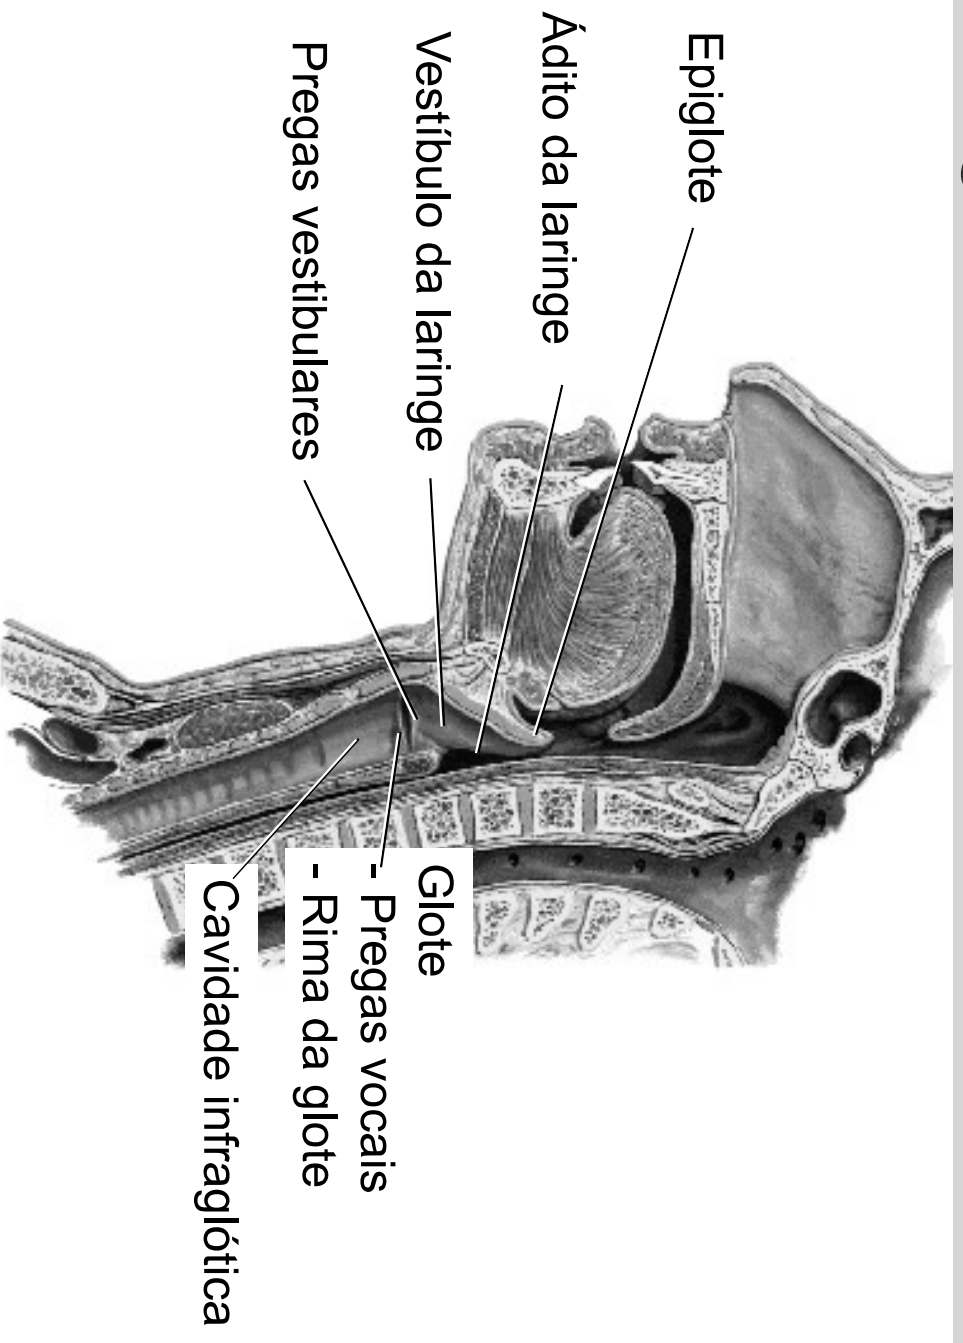

Cartilagem epiglótica

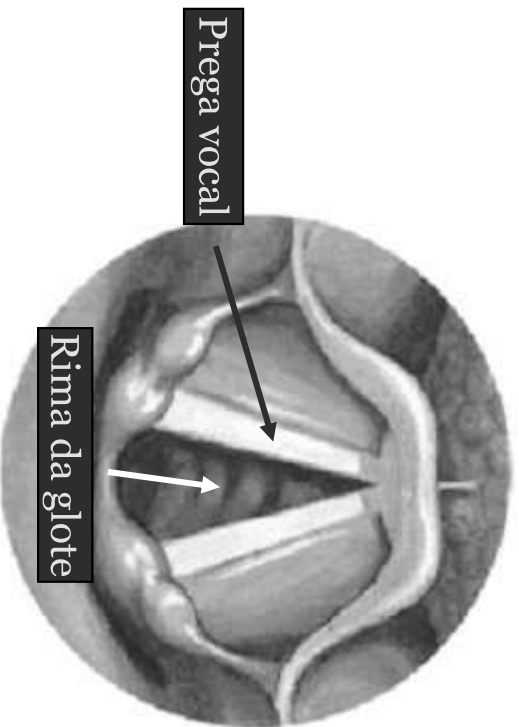

Adito da laringe

Laringe

Glote

- Pregas vocais
- Rima da glote

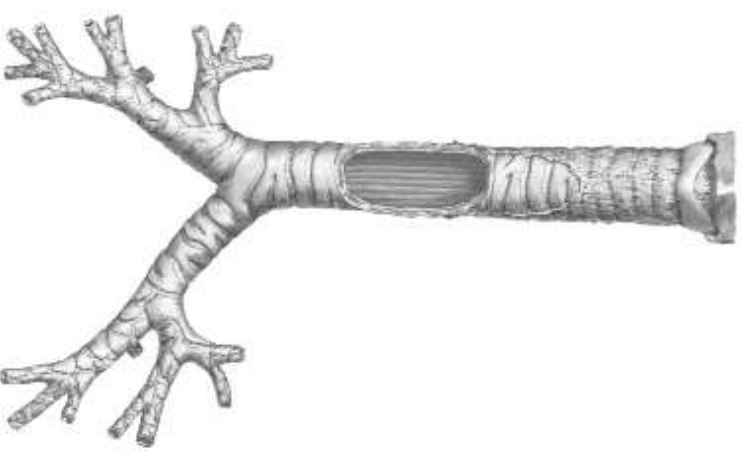

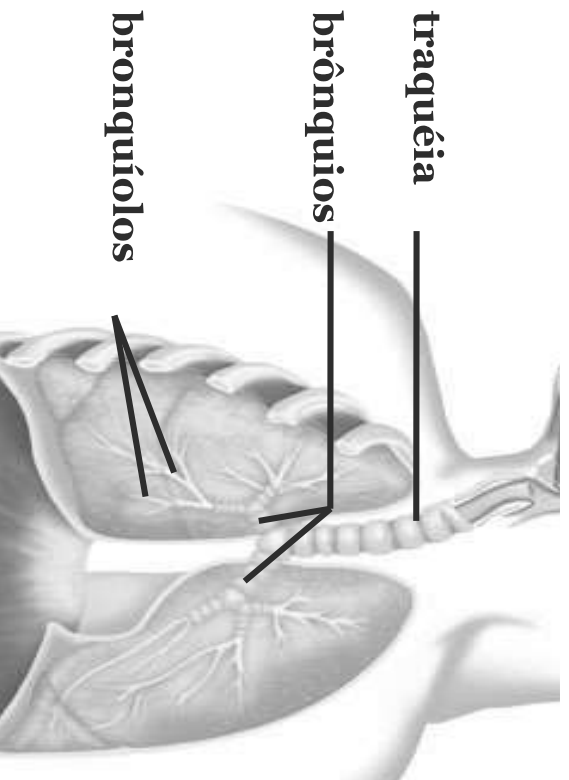

Laringe

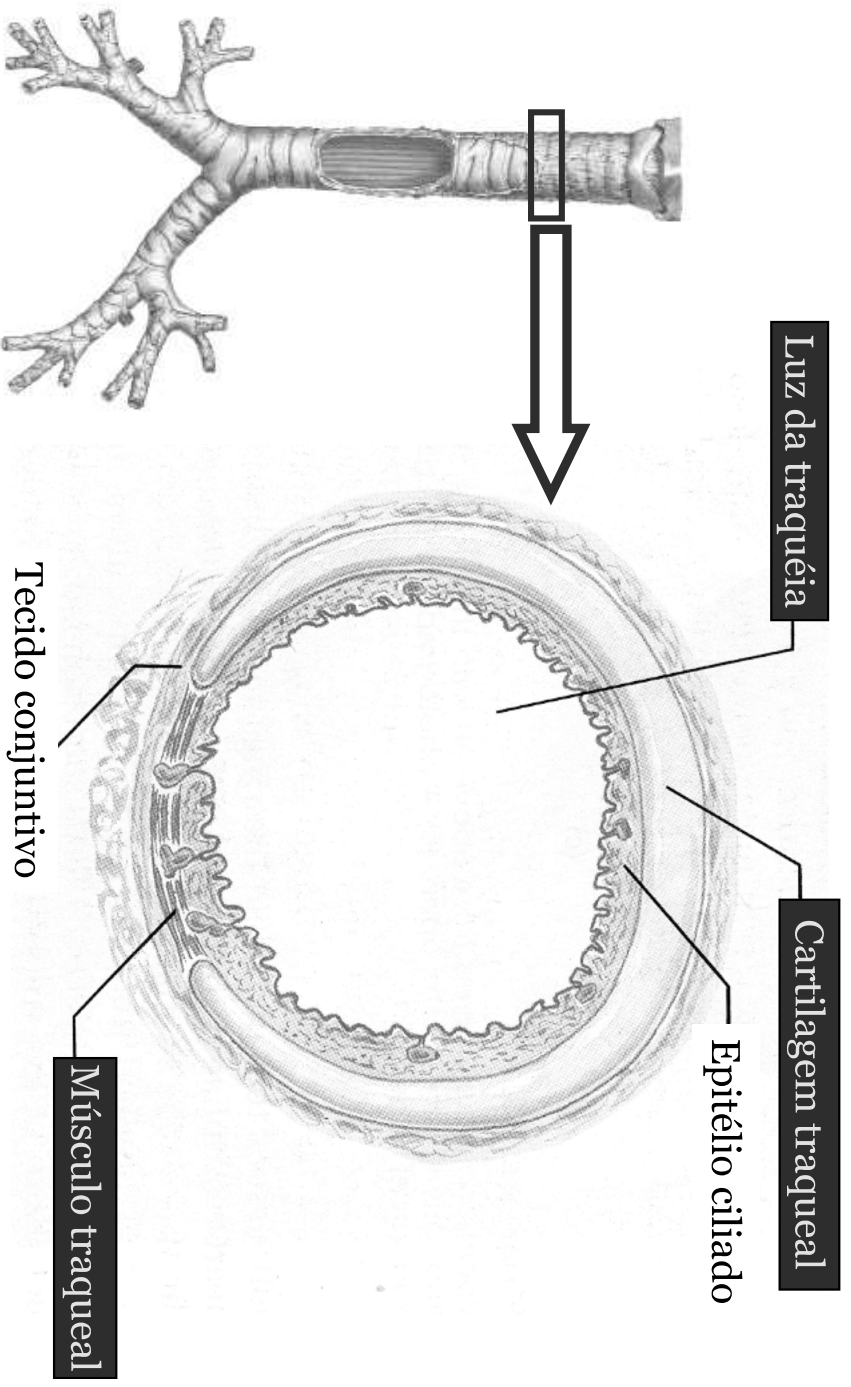

Cavidade infraglótica

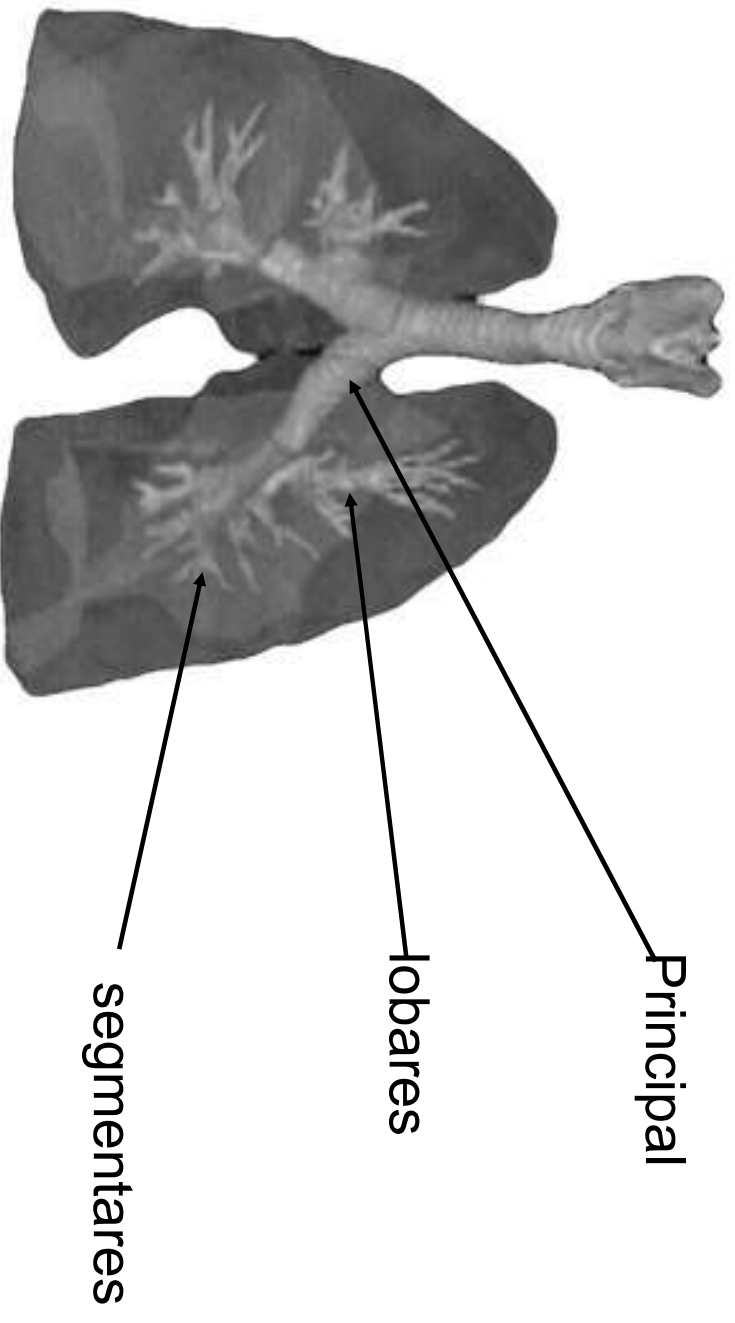

Vias aéreas inferiores

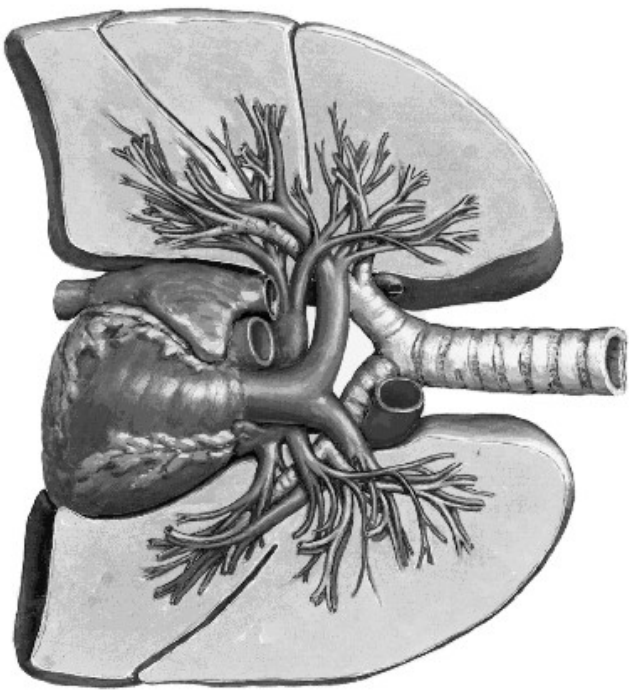

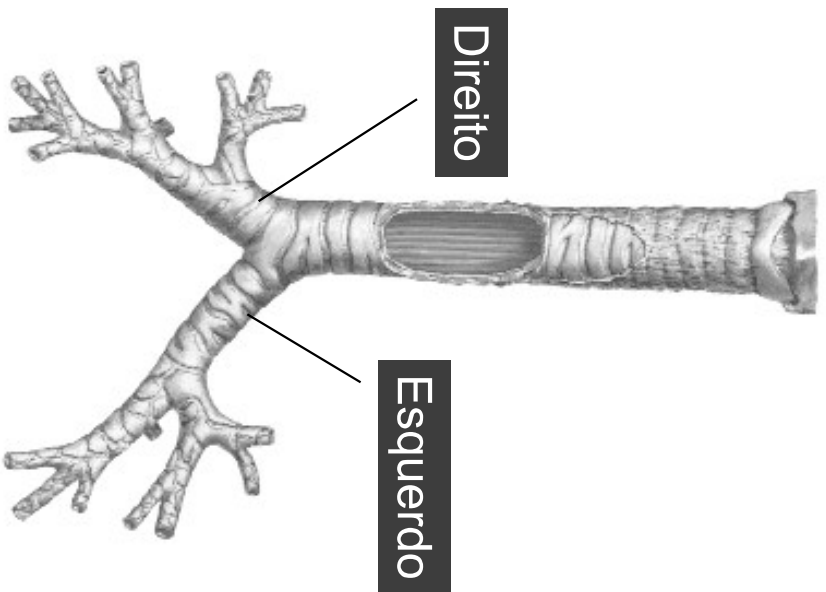

Traquéia

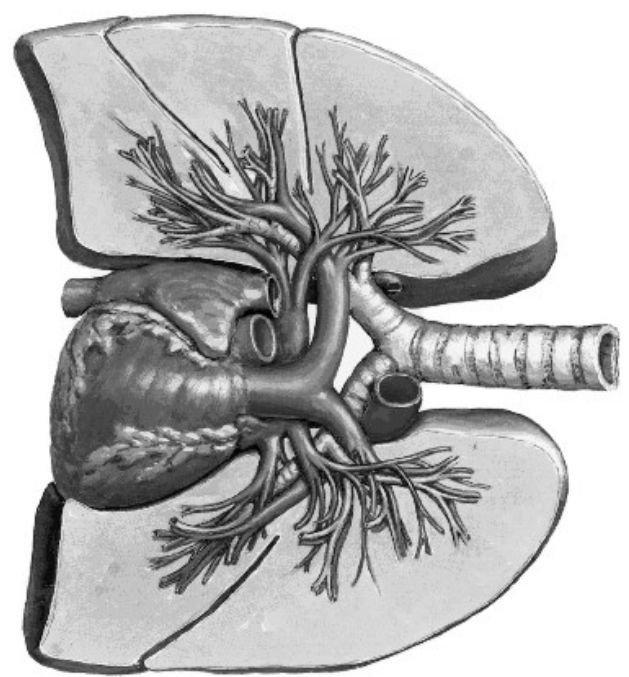

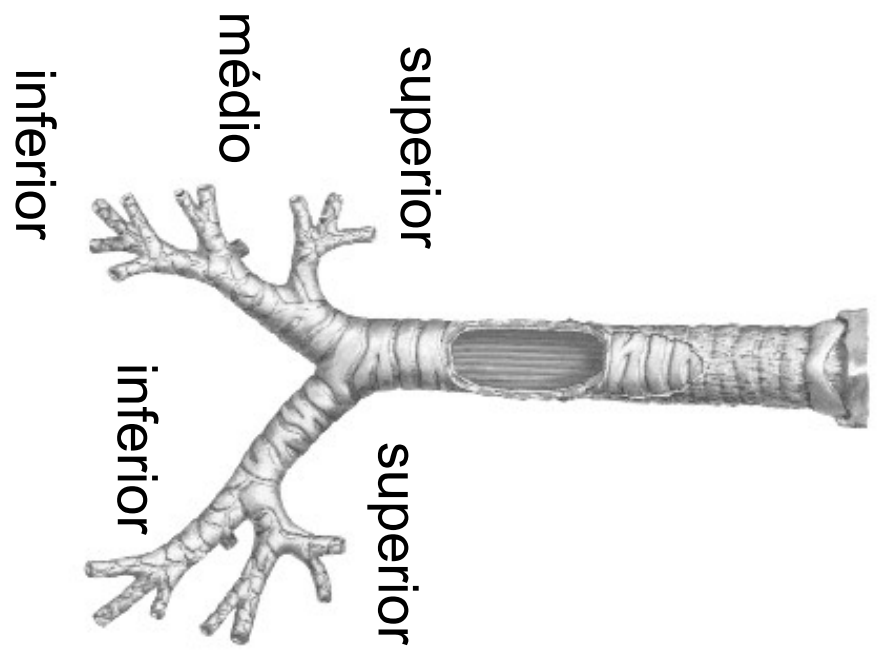

Brônquios

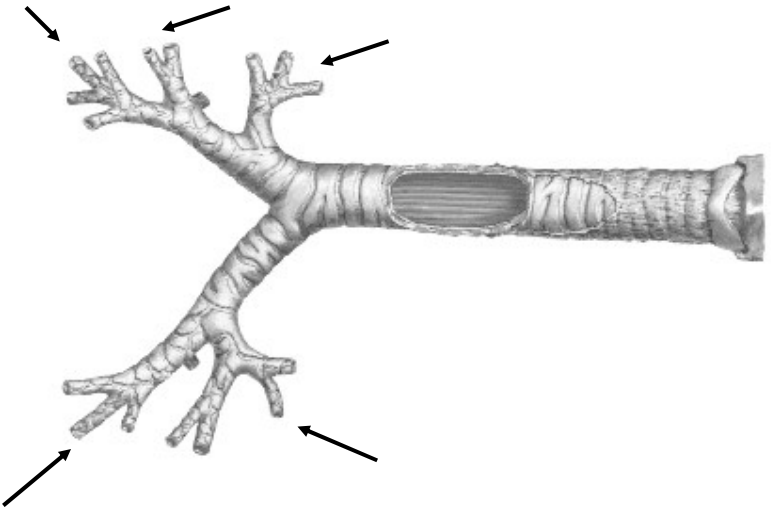

Brônquios principais

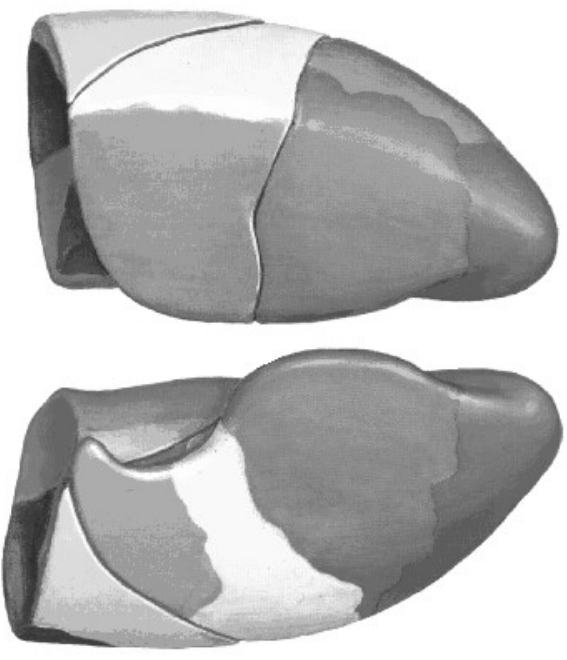

Brônquios lobares

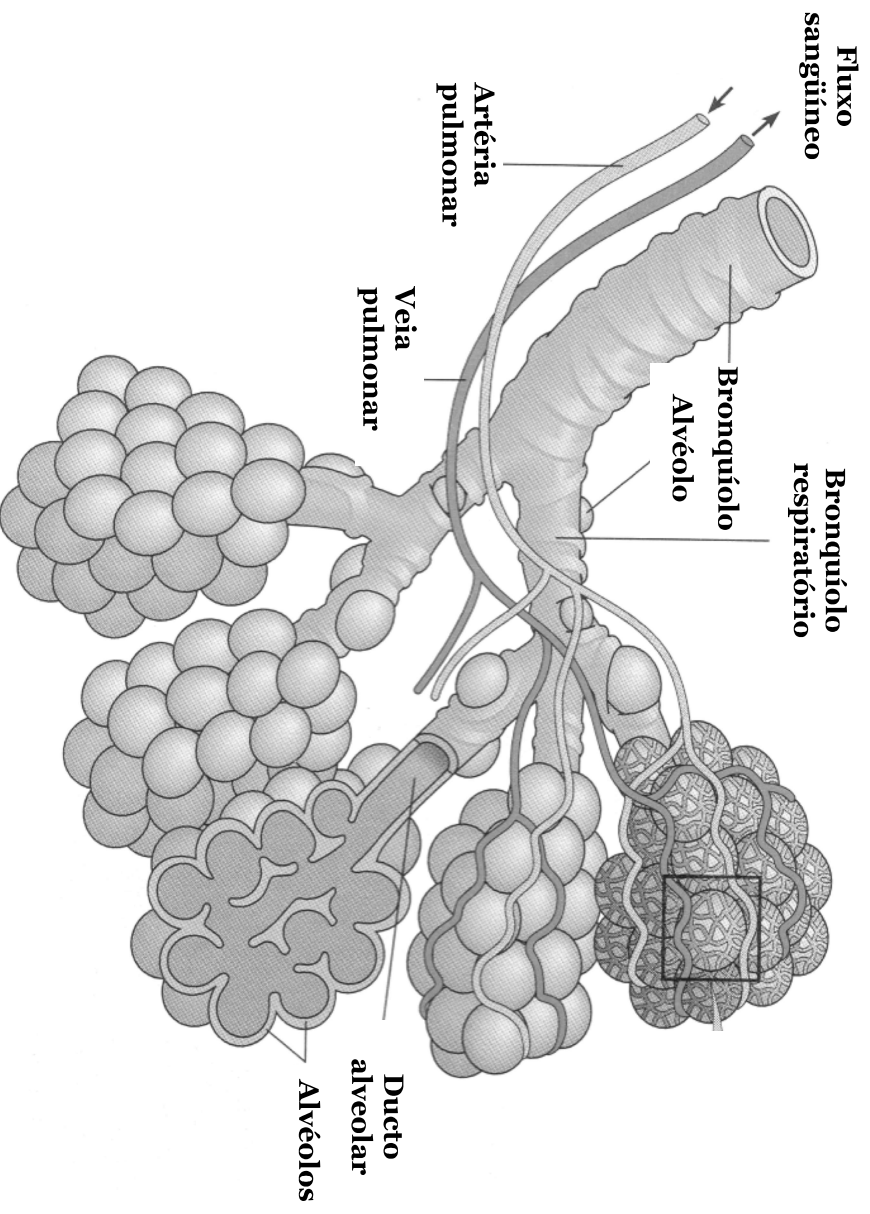

Brônquios segmentares

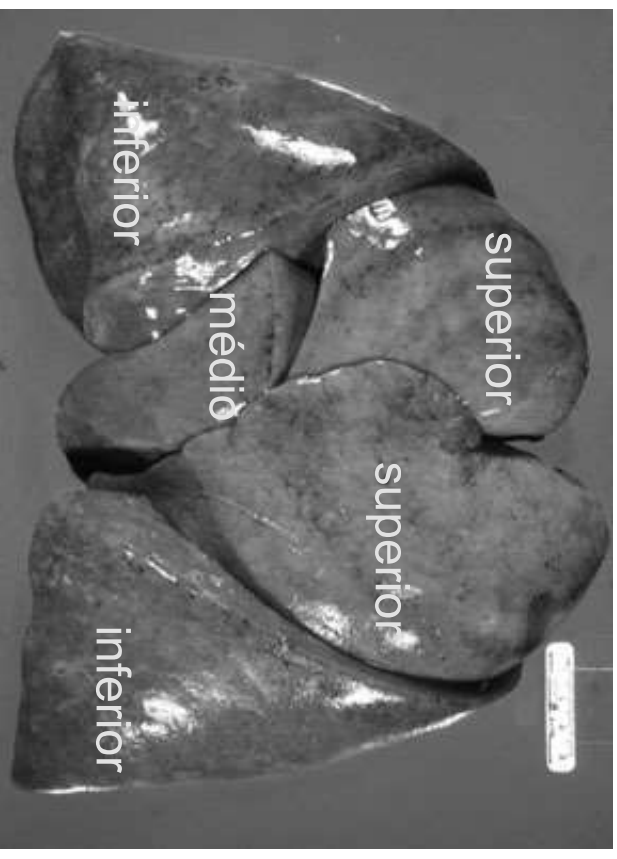

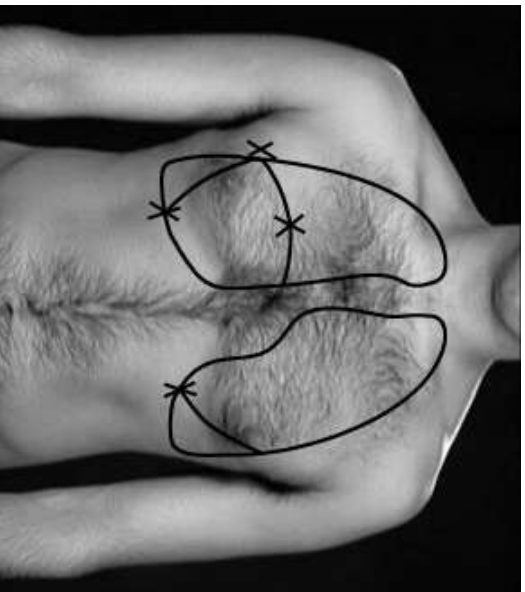

Segmentos broncopulmonares

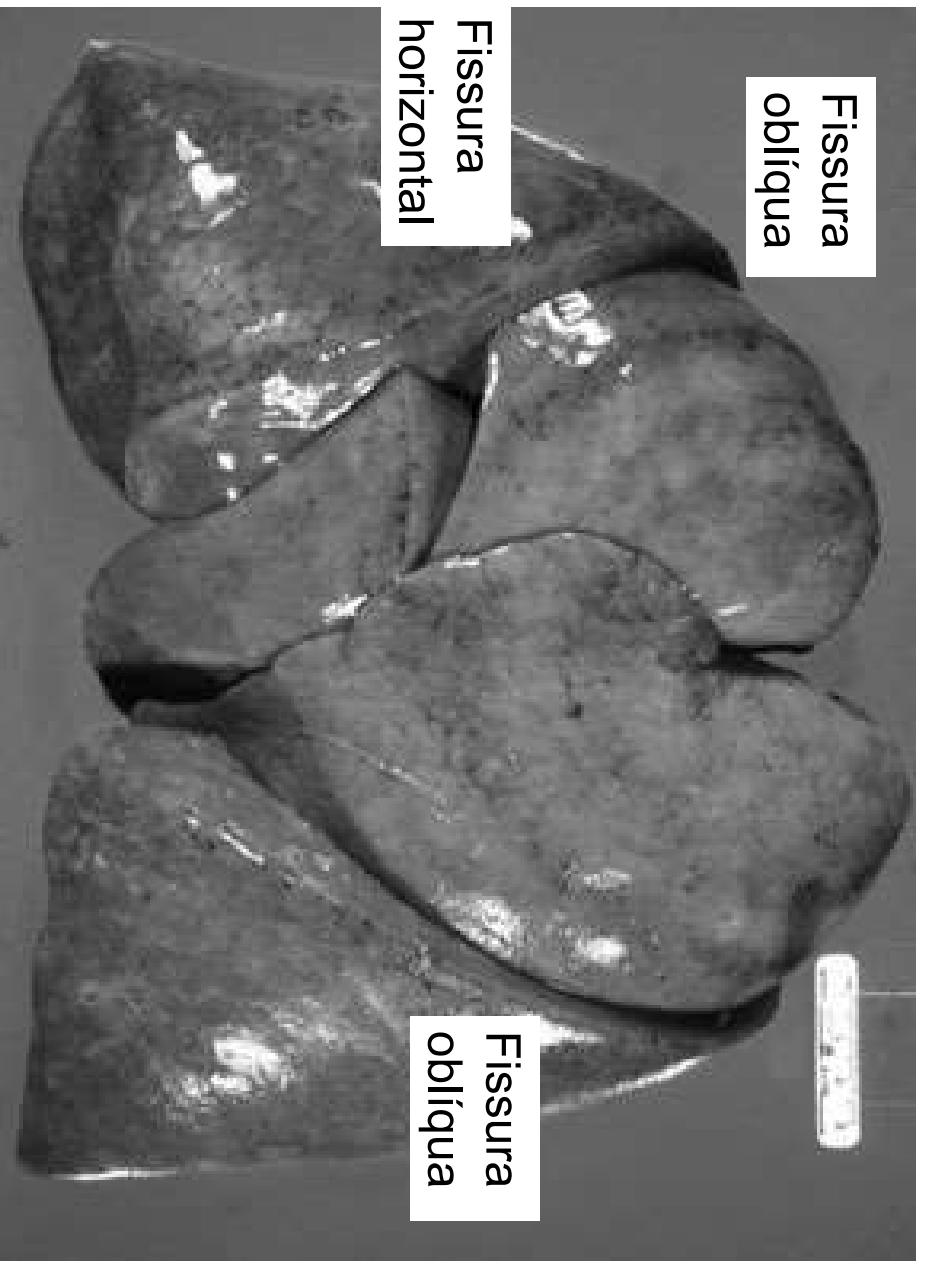

Bronquíolos Alvéolos

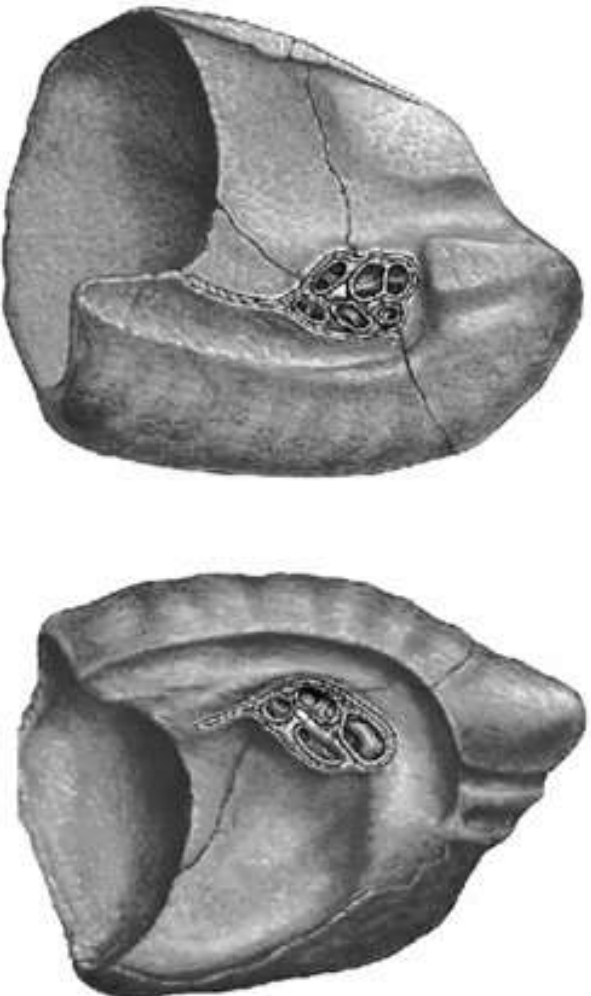

Lobos Pulmonares

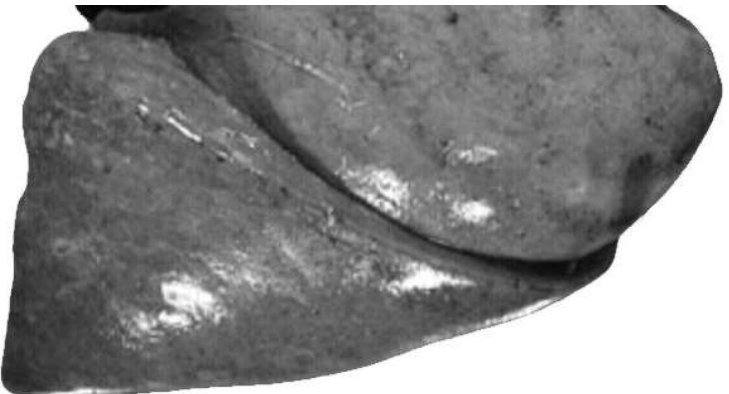

Lobos Pulmonares

Hilo dos pulmões - artérias, veias e brônquios, linfonodos

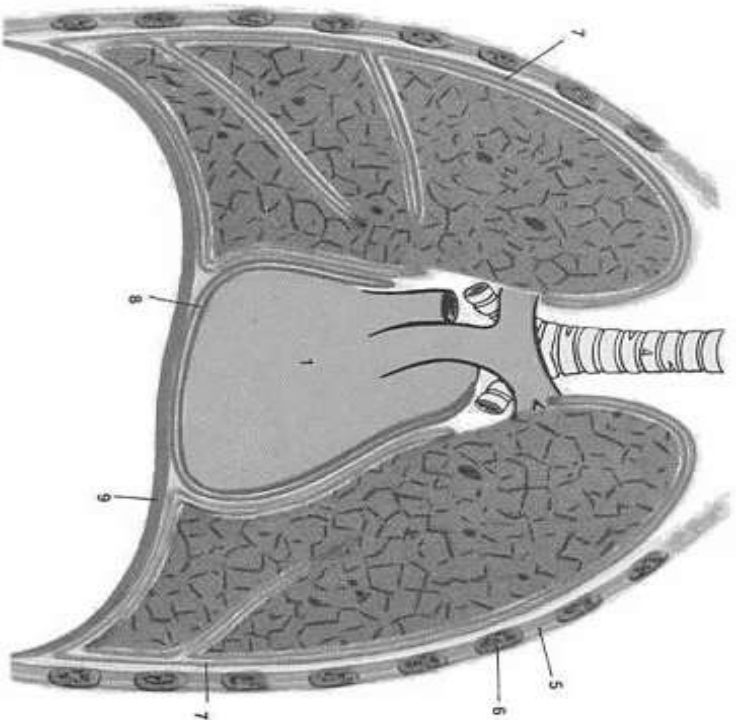

**Pulmão
Saúdavel**

**Pulmão de
Fumante**

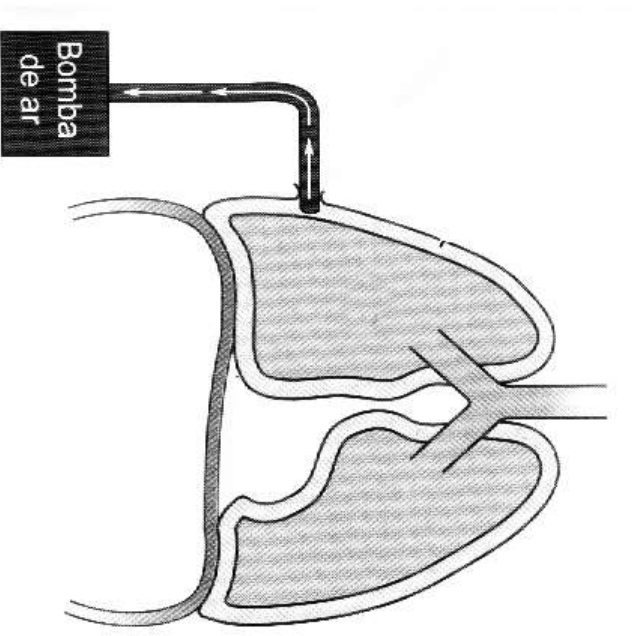

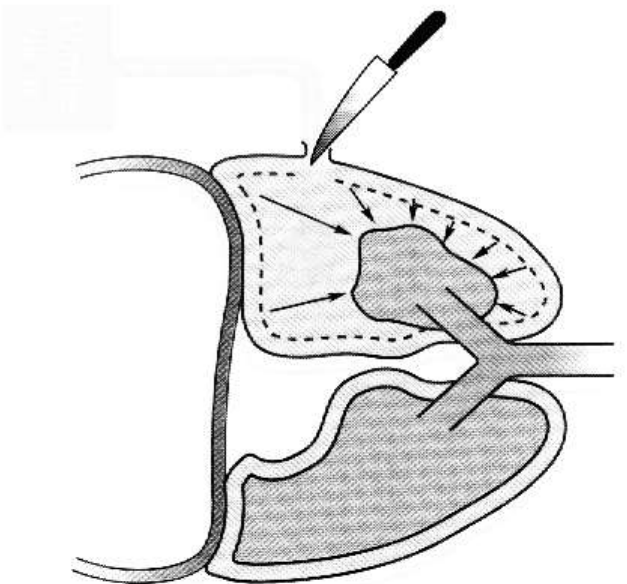

Pulmões e Pleura

- Pleura parietal
- Cavidade pleural
- Pleura visceral

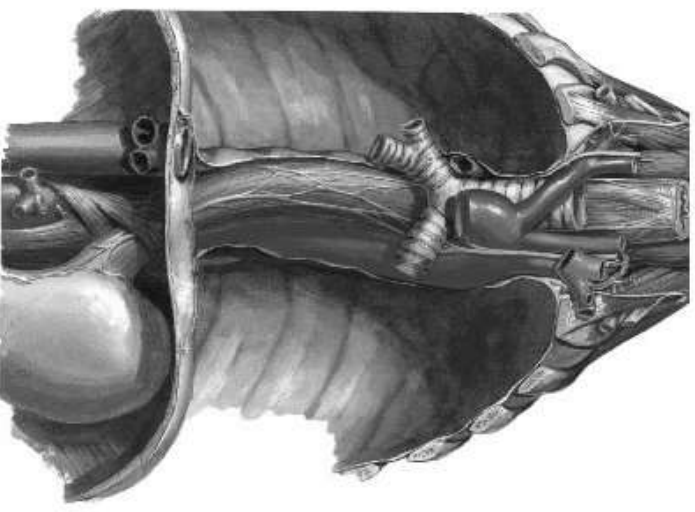

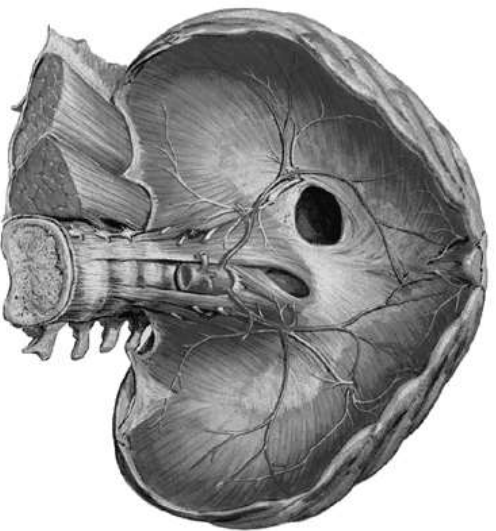

- Pneumotórax
- Hemotórax
- Hidrotórax

Aberturas diafragmáticas

- forame da veia cava
- hiato esofágico
- hiato aórtico

Diafragma
Face Abdominal

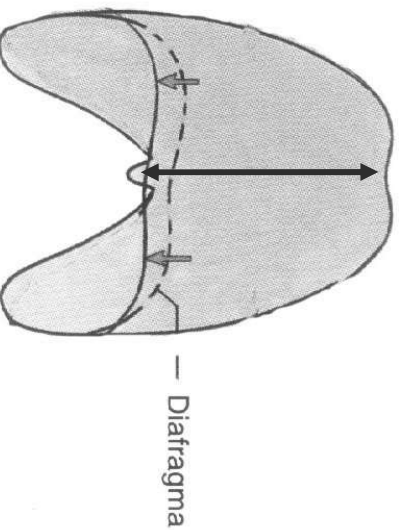

Mecânica respiratória

Respiração calma - diafragmática

Inspiração

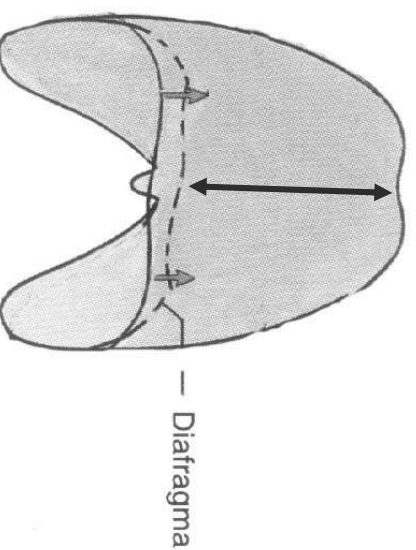

Contração do m. diafragma

Aumento do
diâmetro crânio-caudal

Expiração

relaxamento do m. diafragma

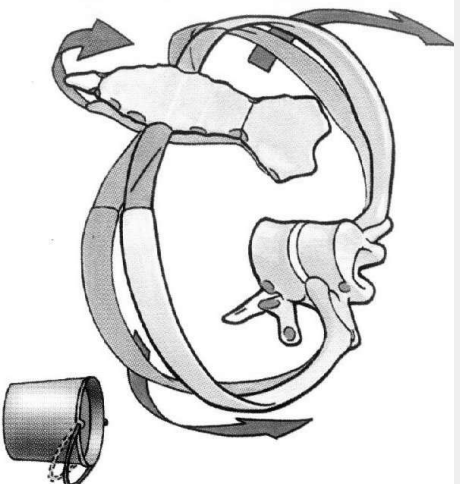

Redução do
diâmetro crânio-caudal

Mecânica respiratória

Respiração mais intensa
Movimento alça-de-balde
Músculos intercostais

Inspiração – aumento do diâmetro látero-lateral

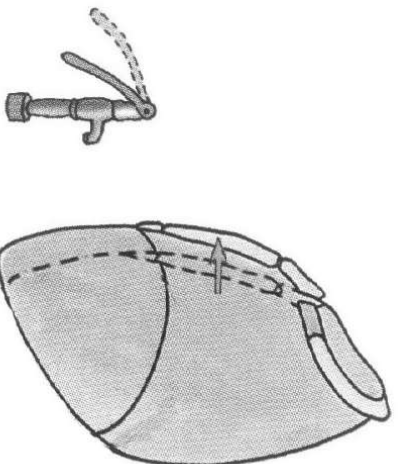

expiração – redução do diâmetro látero-lateral

Respiração forçada

Movimento de braço-de-bomba

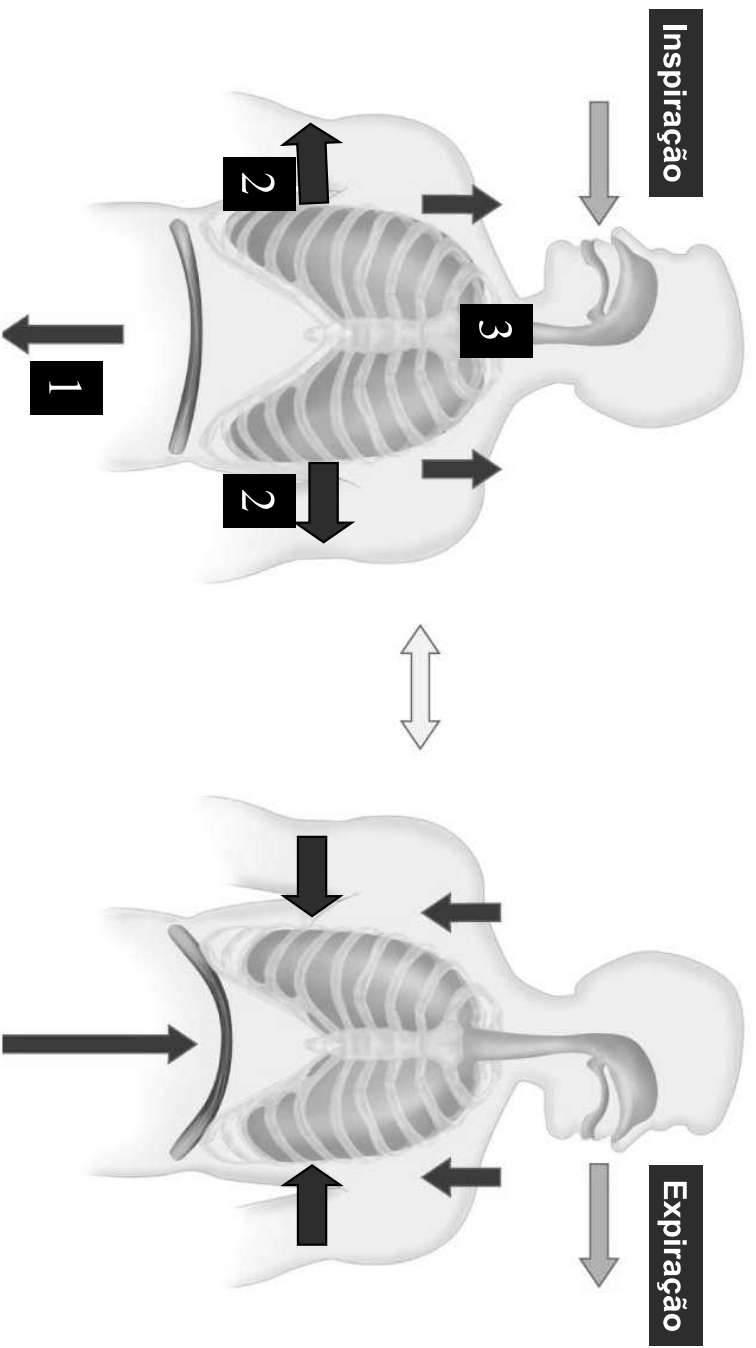

M. esternocleidomastóide, Mm. abdominais

Inspiração = aumento do diâmetro ântero-posterior

Expiração = redução do diâmetro ântero-posterior

Fenômenos Mecânicos da Respiração

Mediastino

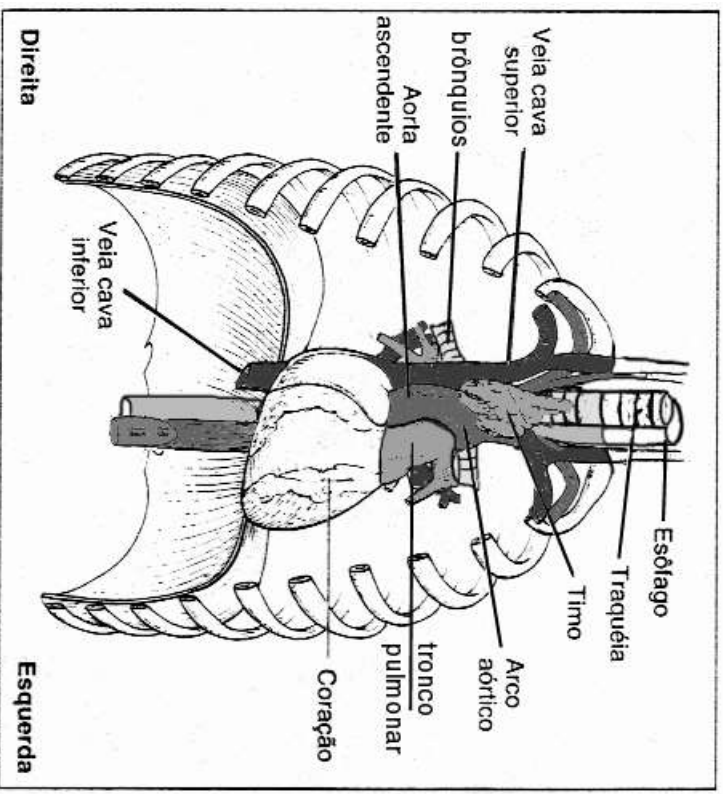

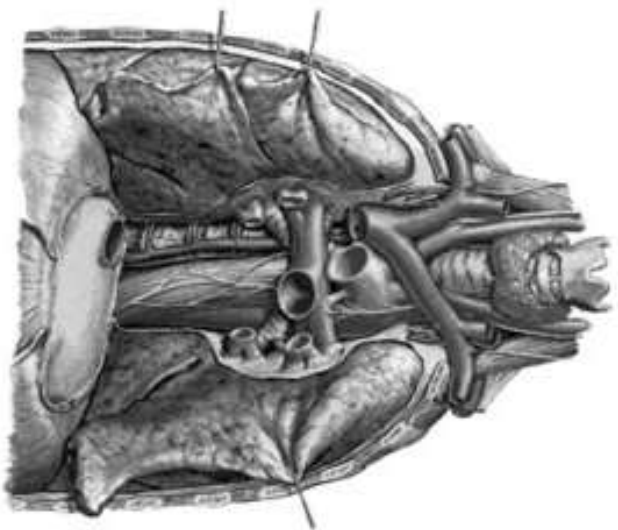

Fig. 2.22 Estruturas dentro do mediastino (vista anterior).
